CATALOGUE PROUDLY DESIGNED BY B R RURAL BUSINESS

WELCOME BACK

2023 has been a year of growth for the Marathon Wagyu team as we continue to build on the plans that were set in motion when we purchased the property Codenwarra and Codenwarra Wagyu stud in 2022.

We undertook the mammoth task of artificially inseminating 650 cows with our own and outcross genetics. Our efforts were rewarded with a 60% success rate. Over 96% of cows and heifers are PTIC and due to start calving in coming weeks.

This year's Marathon Wagyu Platinum sale features bulls with impressive maternal traits which are backed with plenty of data that will be a perfect fit for Fullblood and Purebred breeders looking to improve their female cohort. Every bull we are offering has EBVs in the top 1-10% of the breed and have lifetime traceability, most also have sire and dam progeny carcass data.

Every bull we are offering is in the top 1-10% of the breed and have lifetime traceability, plus most have sire and dam carcass data.

We are also to offer five bulls with a combination of genetics, including some sourced from the US, which we believe has not been seen before in Australia.

Proven, reliable data is the cornerstone of our operations and we have spent countless hours crushside carefully collecting individual animal data as we believe it adds value to our herd and those of our clients. All calves born this year were weighed, birth dates recorded and have been genetically and genomically tested.

We enjoyed a trip to Sydney in April for the Australian Wagyu Association's annual WagyuEdge conference and were honoured when Lucy was asked to speak. She spoke about how Marathon Wagyu was founded, the history behind 'Codenwarra', and her role in the business.

Lucy explained to the audience the benefits behind collecting strong, reliable data and how it has impacted our herd and breeding decisions. You can read an excerpt from her speech on page 11 of this catalogue.

We were very excited to be able to purchase Sahara Park Kanadagene 100 S405 (SPWFS405) from Dean Pollard (centre) at Sahara Park and straws from this impressive animal are on offer at this year's sale.

Michael, Laine and the team have been busy erecting fences and developing single sire joining paddocks for this coming season. We have an exciting AI Breeding Program planned, including over 100 joining's for the Progeny Test Program and an additional 350 for our own herd. We have also selected 20 breeders to flush for future ET programs. Our aim is to increase our genetic diversity and introduce traits to elevate our herd. We are excited for what genetics we have in the pipeline to use in this years joining's.

It has also been a busy year on a personal front, we welcomed a new grandson, Ned Dunn, in June and we are preparing to celebrate Meg and Jono's wedding in early September. The event has been a good excuse to give the old Codenwarra Homestead a lick of paint.

We are excited to present the second annual Marathon Wagyu Platinum Wagyu Sale and invite any interested parties to attend a pre-sale inspection from 10am, followed by lunch, at the homestead at 634 Foleys Road, Emerald.

Thank you for your interest in our sale and please don't hesitate to get in contact if you require any further information.

Here's to another successful year for Wagyu producers across Australia!

Michael and Susan McCosker

Below is an excerpt of Lucy's presentation at the 2023 Australian Wagyu Association conference in Sydney.

My parents, Michael and Susan McCosker own Marathon Wagyu and, along with myself and my three sisters and our families, operate a mixed cattle and cropping operation over 3 properties to the east of Emerald. Codenwarra, Marathon and Lake Nash are the home of our operation, all having the capacity of growing cotton, grains and silage as well as running our Fullblood Wagyu herd.

Marathon Wagyu was founded in 2018 by purchasing three proven foundation cows of the Codenwarra herd. First generation daughters of Itoshigenami, Michifuku and Terutani 40/1. Using these females along with industry leading genetics, we ran back-to-back ET programs using both IVF and embryo flush technologies.

This achieved a strong base herd of bulls to use ourselves and females that we continued to flush the following year. Alongside this, we purchased two full drops of Codenwarra heifers which established our numbers and kick started the Marathon Wagyu journey.

Our main breeding objectives in our cattle operation are breeders, feeder steers, bulls and genetics. To achieve this, we extensively collect data year-round which we fit into our existing processes to minimise handlings. Our maternal, fertility and growth traits are collected on farm.

Gestation length and **birth weight** have become increasingly more important to our herd since we started joining yearling heifers. As we heavily use AI, we are able to calculate gestation length by getting **birth dates**. Along with this, we record weights in the first 24 hours from birth.

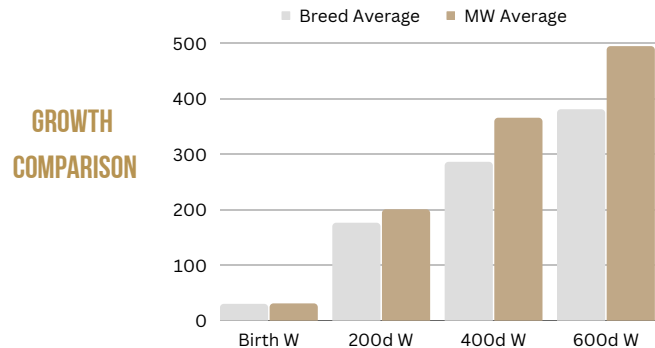

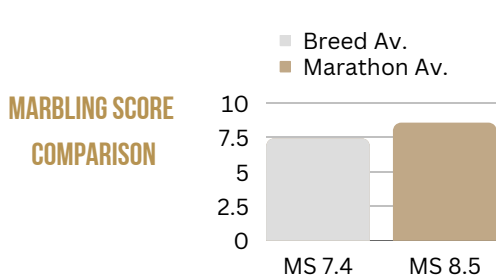

As we achieve most of our joining's between November and January, we collect **200-day** and **mature cow weights** in April at weaning. By getting an accurate birth weight and 200-day weight, the **milk EBV** is calculated. From weaning, all males and females are backgrounded on a formulated ration. Heifers exit backgrounding 2-3 months before joining to acclimatise to their paddock. Steers stay on formulated rations, according to their age and growth, before being on sold to a feedlot for finishing.

During our backgrounding program, **400-day** weights are collected. **600-day** weights are collected mid-year. **Scrotal** size of bulls 12 months and older are recorded in September as well as **semen tested** before our annual bull sale and our own joining.

The carcass traits of all of our steers are collected using Aus-Meat and MIJ grading systems. We aim to be present at every slaughter with our MIJ camera and record **carcass weights, eye muscle area, rump fat, marble score and marble fineness**.

All data that we collected is submitted into Breedplan to improve our accuracies and gives our clients confidence to invest in our genetics. In 2021, the Australian Wagyu Association released an analysis taken over ten years of data submitted to Breedplan. We compared this data with our data collected over this same time period.

The health of our animals is one of the most important focuses of our operation. We have adopted the Immune Ready vaccination program across our whole herd. This is an industry standard for animal health that is self-governed and industry supported (read more about the Immune Ready program at the end of the catalogue).

In 2021, we came on board with the Australian Wagyu Association as a donor herd and sire owner for their Progeny Test Program. We contributed 100 breeders in 2021, 200 in 2022 and this year we will contribute more. AWA will run this program over 10 years, analysing progeny from the maximum number of emerging industry sires for high value Wagyu sector traits. The program will also help to develop new Wagyu-specific traits for reproduction, structure, carcase and eating quality. We are excited and proud to be a part of this program and have enjoyed joining our breeders to emerging sires from all over the world. The first cohort has recently been weaned with steers entering our backgrounding program and heifers being joined this November.

In her presentation, Lucy also touched on the challenges we face as well as our future direction and developments of the stud and business. We are passionate about showing our youth, community and industry what we do, and we encourage you to come and see our operation.

This was a great experience for our team, and we thank AWA for the opportunity.

SUMO CATTLE CO HIRASHIGETAYASU E148 (AI) (ET) (SMOFE0148)

E148 was used in the Codenwarra Wagyu herd for over 10 years, producing exceptional quality breeders with proven and reliable maternal and carcass traits. E148 boasts high accuracy growth trait EBV's in the top 1%. With over 300 progeny analysed, his progeny are averaging 227kg at weaning, 353kg at 400 days and 546kg at 600 days. E148 has had 29 progeny slaughtered, with an average marbling score of 8.6 and a HSCW of 451kg.

MARATHON MICHIFUKU P0011 (ET) (MSMF0011)

P0011 is one of Marathon Wagyu's impressive upcoming sires. His sire, Sumo Cattle Co Michifuku F154, is a well balanced animal known for his maternal and carcass traits. P0011's dam, Codenwarra X0097 is a first generation Terutani 40/1 daughter. With a 200, 400, 600, MCW & CWT EBV's in the top 1-5% and a strong marbling score, this sire will produce phenotypically sound, well balanced breeders.

CODENWARRA HIRASHIGETAYASU L1299 (MCKFLO1299)

As the son of Sumo Cattle Co Hirashigetayasu E148 (AI) (ET), L1299 has inherited proven and reliable maternal and carcass traits. His mother MCKFC0345 is a double cross TF148 female going back to the Chiyotake and Hikohime maternal lines. L1299 is now deceased, however due to early recognition of his superior genetics a limited number of straws are available.

SUMO CATTLE CO MICHIFUKU G002 (AI) (SMOFG0002)

Sumo Cattle Co Michifuku G002 is a proven bull with high accuracy EBV's. G002 is 1 of 4 animals from sire World K's Michifuku that has accuracy over 90% on maternal traits and 70% on carcass traits, sitting beside industry leading bulls Sanjirou, F126 and Katsumi. Carcass data results demonstrate G002's potential with an average marbling score of 8, HSCW of 433kg and EMA of 86.2.

SAHARA PARK KANADAGENE 100 S405 (SPWFS405)

Son of World Ks Kanadagene 100 with the absolute powerhouse sire stack of all time; DM100 x Moyhu D507 x TF151 x Mayura JNR x TF147 x Kitaguni Jr x Michifuku x Takazakura direct out of the Suzutani cow family. Bred by Dean and Sam Pollard of Sahara Park Wagyu, Marathon Wagyu purchased S405 for \$52,000 at the 2023 Elite Wagyu Sale as an outcross to perfectly complement our breeding program. Great to see similar breeding take out carcass champion at the Ekka this year.

SUMO CATTLE CO MICHIFUKU M65 (SMOFG0065)

Sumo Cattle Co Michifuku M65 has a strong pedigree stack and has been used in the Codenwarra and Marathon herds for the past six years. He has been used to breed our replacement females and feeder steers. He recently had progeny slaughtered with an excellent result. 50% of the carcasses were MS g & g+ with an additional 21% MS 8. This has seen his EBV's and accuracies improve dramatically. This gives us confidence and he is being used heavily in our 2023 breeding program.

OUTCROSS REFERENCE SIRES USED IN ARTIFICIAL INSEMINATION PROGRAMS

TYDDEWI N4431 (ET) (DSWFN4431)

EWETEC ETCFP8035 (AI) (ET)

STATKAR FARMS STKR SANJITOMICH 016H (ET) (STKFRO16)

American sire, Sanjitomich 016H, is a rising sire that we are excited to be proving out in our program.

His sire, Sanjirou, is bred from the Suzutani cow family and sired by Michifuku. He has proven ability to pass on great meat quality, large rib eye, thick rib and high yielding carcasses resulting in world renowned consistency. Impressively, Sanjirou did extremely well in World K's Australian F1 Feeder Program where 6800 of his calves were fed for 540 days achieving 0.95kg/day with 88% grading 9+ and the remaining 12% grading from 7 – 9 on the AUS-Meat scale.

Having Sanjirou bred to a CF500 series female (linebred Itomichi/Itoshigenami) combined with traditional Japanese breeding of Dai 7 maternals/Itoshigenami and Sanjirou proves to be a winning combination as seen in modern day leading sires such as Itoshigenami Jnr.

With our operation being first to submit data to Breedplan, we are excited to take you on our journey in proving out this rising star in Australia.

MATERNAL AND FERTILITY TRAITS:

GESTATION LENGTH (DAYS) - GL

An estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

MILK (KG)

An estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

GROWTH TRAITS:

200-DAY GROWTH (KG) - 200

Calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

600-DAY WEIGHT (KG) - 600

Calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

CARCASE TRAITS:

CARCASE WEIGHT (KG) - CWT

Based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 990 days.

EYE MUSCLE AREA (SQ CM) - EMA

Calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 420kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 420kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

MARBLE SCORE (AUS-MEAT MARBLE SCORE) - MS

An estimate of the genetic difference in the Aus-Meat Marble Score in a 420kg carcass. Larger more positive values are favourable.

SCROTAL SIZE (CM) - SS

Calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

BIRTH WEIGHT (KG) - BWT

Based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

400-DAY WEIGHT (KG) - 400

Calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

MATURE COW WEIGHT (KG) - MCW

Based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

RETAIL BEEF YIELD (%) - RBY

Indicates genetic differences between animals for retail yield percentage in a standard 420kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

RUMP FAT (MM) - RUMP

Calculated from measurements of subcutaneous fat depth at the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and is adjusted to a standard 420kg carcass. This EBV is an indicator of the genetic differences in fat distribution on a standard 420kg carcass. Sires with low, or negative, fat EBV are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

MARBLE FINENESS (CAMERA MARBLING FINENESS INDEX) - MF

An estimate of the genetic difference in the Marbling Fineness Index as measured by the Japanese Digital Image Camera. Sires with higher EBVs are expected to produce progeny with higher Marbling Fineness Index.

SELECTION INDICES:

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system.

WAGYU BREEDERS INDEX (\$) - WBI

The WBI can be used to select Fullblood bulls that will produce females with high genetic merit for growth and breed average slaughter progeny for marbling. The WBI is suited to commercial producers who rely on low-input, grass-based production systems to produce steer progeny for high feedlot entry weight and high growth daughters. Heifers are retained for breeding and therefore maternal traits are of importance. Steers are assumed to be slaughtered at 32 months after 550 days of feedlot finishing targeting 460kg carcasses with breed average Marble Score.

SELF-REPLACING INDEX (\$) - SRI

The SRI can be used to select Fullblood bulls that will produce females with moderate genetic merit for growth and above breed average slaughter progeny for marbling (targeting marble score higher than 8). The SRI is suited to commercial producers who provide supplementary feeding on grass-based production systems to produce steer progeny of average feedlot entry weight and moderate growth daughters. Heifers are retained for breeding and therefore maternal traits are of importance. Steers are assumed to be slaughtered at 32 months after 550 days of feedlot finishing targeting 435kg carcasses with above average Marble Score – higher than 8.

FULLBLOOD TERMINAL INDEX (\$) - FTI

The Fullblood Terminal Index (FTI) has increased weighting on the Marble Score EBV and can be used to select bulls for the production of profitable slaughter animals where no progeny are retained for breeding. The FTI is suited to commercial producers of Fullblood cattle who provide supplementary feeding to grass-based production system before feedlot entry. The FTI targets to produce steer and heifer progeny of average feedlot entry weight and Marble Score significantly higher than 8.

F1 TERMINAL INDEX (\$) - F1 INDEX

The F1 Index has predominant weighting on the Marble Score EBV and can be used to select bulls for the production of profitable slaughter animals from cross-breeding where no progeny are retained for breeding. The F1 Index is suited to commercial producers of crossbred slaughter cattle using Fullblood bulls and non-Wagyu females. The F1 Index targets average carcass weight for steer progeny of 420kg and 387kg for heifers with above average F1 Marble Score (higher than 6) based on high marbling genetic merit of the sire.

ACCURACY:

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease. Accuracy ranges from 0-99% and can be interpreted using this guide:

Accuracy range	Interpretation
<50%	Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree.
75-90%	Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
>90%	High accuracy estimate of the animal's true breeding value.

NOTES: Marathon Sanjitomich T0392 (AI) boasts the highest genomic marble score of our sale with a huge EMA to compliment. T0392 is bred to produce high end carcasses, perfect for crossing over your content and fullblood females, introducing strong marbling and rib eye bloodlines for a consistent result. T0392's current data consists of: 30kg at birth and 212kg at weaning. His half-brother was slaughtered with a HSCW of 367kg and MIJ MS 10.54.

LOT 34 SAHARA PARK KANADAGENE 100 S405 (AI) (ET) x 5 STRAWS

IDENT: SPWFS405
DOB: 27/09/2021
REG. STATUS: Herdbook Registered
GRADE: Fullblood
COLOUR: Black
GENETIC STATUS: B3F, CHSF, CL16FU, F11F, IARSF

NOTES: S405 is a genetic recessive FREE son of World Ks Kanadagene 100 with the absolute powerhouse sire stack of all time; DM100 x Moyhu D507 x TF151 x Mayura JNR x TF147 x Kitaguni Jr x Michifuku x Takazakura direct out of the Suzutani cow family. Suzutani is the Queen of the breed for good reason, her descendants perform at the highest level. The pedigree is Wagyu royalty from top to bottom, this bull ticks all the boxes and then some. Easily the standout bull in his class, super correct type, gentle temperament, easy doing and bred to perfection. Read more on our reference sires page.

REG. STATUS: Herdbook Registered
GRADE: Fullblood
COLOUR: Black
GENETIC STATUS: B3F, CHSF, CL16F, F11C, F13F, IARSF

NOTES: Sumo Cattle Co Michifuku M65 has a solid pedigree stack and has recently had progeny slaughtered with an excellent result. 50% of the carcasses were MS 9 & 9+ with an additional 21% MS 8. This has seen his EBV's and accuracies improve dramatically. This gives us confidence and he is being used heavily in your 2023 breeding program.
